My Pharmacist · demo pills (actual size)

1. Print at 100% ("Actual size"), on matte paper if you can: glossy paper reflects light into the camera.
2. Check the scale bar below measures exactly 5 cm. If not, the printer scaled the page.
3. Cut out a front-and-back pair loosely, keeping the two halves joined.
4. Fold on the dotted line with the pictures outward. Glue a piece of card inside for thickness.
5. Cut along the tablet's edge through both layers. Front and back line up.

Not real medicine: printed stand-ins of the app's sample tablets, for demos only.

Exemestane 25 mg 6 mm · taken 8 AM

Dexamethasone 1.5 mg 6 mm · taken 8 AM

Metoclopramide 10 mg 8 mm · taken 8 AM and 8 PM

Ondansetron 8 mg 9 mm · taken only when feeling sick

Photos: ePillID benchmark (NIH NLM Pillbox and Pill Image Recognition Challenge images). Sizes: FDA labels via RxNorm.
